

Releases history

v.2.000

Original system. First stable release.

v.2.001

- DESCRIPTION field added to 'input' function of ASAP plans to initialize the description of the plan.
- 'is_requested' function ASAP plan function added. Checks if the user requested a parameter for output
- 'FROM_FILE' internal changes – make more effective
- 'XML::TreeBuilder' dependency – the way to parse an xml file changed.
- GENERAL/Update functionality added (admin page new menu point) – allow to update the system from one zip package (can be installation package)

v.2.002

- Description bug fixed – the bug that showed double description or no description for plans.
- 'report' function in ASAP.pm added – does the same thing that 'error', but doesn't exit.
- JOB_SIZE section in plan calling added to make possible the job progress count delegation.
- 'job_prog' function in ASAP.pm added – allows to acquire job progress.

v.2.003

- XML unsafe characters now safe
- Installing plan html changed slightly – 'agent/subfolder' instead of 'agent/unigene'
- Jobs times added to statistics
- use File::Temp
- Make requirements about LOAD DATA INFILE permissions for database
- File updation bug is fixed (if replaced with smaller version the file still kept the extra part)
- Import/export is added to the admin functionality
